# Embrion IVF Center

Changing Lives

Embrion IVF is a private limited company dedicated to serve fertility experts. Our aim is to provide exclusive world class ART lab infrastructure.

## OUR BUSINESS MODULE

### 1<sup>st</sup> STEP

After treating patient with stimulation protocol at your set up refer patient to us →

### 2<sup>nd</sup> STEP

We will do lab work: Ovum Pick up, Embryo Culture and Embryo Transfer →

### 3<sup>rd</sup> STEP

After Embryo Transfer, patient will be back to you for further consultation

## OUR KEY BENEFITS

1. You use this lab as your own facility. Ovum pick-up and Embryo transfer can also be done by you
2. As per your wish in house team of Embryologists available 24/7
3. Exclusive ART lab gives you all the necessary tools and technology under one roof
4. As per your demand our team of experts will be at your disposal and assistance
5. Company provides class one communication system to avoid any kind of lapse

## SERVICES & FEES

Complete IVF procedure:	Rs 35,000
IVF + ICSI:	Rs 45,000
Semen preparation & IUI:	Rs 5,000
Treatment with donor semen:	Rs 10,000
Treatment with donor oocyte:	Rs 1,00,000 -
Treatment with donor embryo:	Rs 25,000
Human Egg banking:	Rs 5,000
Frozen embryo transfer:	Rs 25,000
Surrogacy:	Rs 5,00,000

<sup>†</sup> Data on file, Schering AG. Progesterone effects of dydrogesterone *in vitro*, *in vivo* and on the human endometrium. *Maternal* 2009; 86(1):33 – 311. <sup>‡</sup> Significant relative risk reduction with dydrogesterone as compared to control (no treatment) group.

**Composition:** Each white film-coated tablet contains: Dydrogesterone IP 10 mg, Excipients: a Colour, Titanium dioxide IP Inductane, Progesterone derivatives, Treatment of progesterone derivatives such as: • Treatment of dydrogesterone • Treatment of endometrium • Treatment of secondary amenorrhoea • Treatment of irregular cycles • Treatment of dysfunctional uterine bleeding • Treatment of pre-menstrual syndrome • Treatment of threatened and habitual abortion • Treatment of infertility due to luteal insufficiency. Hormone replacement therapy: • To counteract the effects of oestrogen on the endometrium in hormone replacement therapy for women with disorders due to natural or surgical induced menopause with or without oestrogen. **Dosage and Administration:** Oestrogen treatment schedule and duration of treatment may be adapted to the severity of the dysfunction and the clinical response. Dydrogesterone: 10 to 20 mg dydrogesterone per day from day 6 to day 26 of the Menstrual cycle. Endometrials: 10 to 20 mg dydrogesterone per day from day 5 to day 26 of the cycle or continuously. Dysfunctional uterine bleeding: When treatment is started to avert a bleeding episode, 20 to 20 mg dydrogesterone per day to be given for up to 10 days. For continuous treatment, 10 to 20 mg dydrogesterone per day should be given during the Second half of the menstrual cycle. The starting day and the number of treatment days will depend on the individual cycle length. Withdrawal bleeding occurs if the endometrium has been adequately primed with other endogenous or exogenous oestrogen. Secondary amenorrhoea: 10 to 20 mg dydrogesterone per day, to be given daily for 14 days during the second half of the theoretical menstrual cycle to produce an optimum secretory transformation of an endometrium. Fetal loss: A miscarriage primed with either endogenous or exogenous oestrogen. Pre-menstrual syndrome: 10 mg dydrogesterone twice daily starting with the second half of the menstrual cycle until the first day of the next cycle. The starting day and the number of treatment days will depend on the individual cycle length. Irregular cycles: 10 to 20 mg dydrogesterone per day starting with the second half of the menstrual cycle until the first day of the next cycle. The starting day and the number of treatment days will depend on the individual cycle length. Threatened abortion: An initial dose of up to 40 mg dydrogesterone may be given followed by 20 to 30mg per day until symptoms remit. Habitual abortion: 10 mg dydrogesterone twice daily until the twelfth week of pregnancy. Infertility due to luteal insufficiency: 10 to 20 mg dydrogesterone daily starting with the Second half of the menstrual cycle until the first day of the next cycle. Treatment should be maintained for up to three consecutive cycles. Hormone replacement therapy: Continuous sequential therapy: An oestrogen is given continuously and one tablet of 10mg dydrogesterone is added for the last 14 days of every 28 day cycle in a sequential manner. Cyclic therapy: When an oestrogen is used cyclically with a treatment free interval, usually 12 days on and 7 days off. One tablet of 10 mg dydrogesterone is added for the last 10-14 days of oestrogen therapy. Depending on the clinical response, the dosage can substantially be adjusted to 20 mg dydrogesterone per day. There is no relevant use of dydrogesterone before menarche. The safety and efficacy of dydrogesterone in adolescents aged 12-18 years has not been established. Currently available data are described in section 4.8 and 5.1, but no recommendation on a possible use can be made. **Contraindications:** Known hypersensitivity to the active substance or to any of the excipients. Known or suspected progesterone dependent neoplasms. Undiagnosed vaginal bleeding. Contraindications for the use of oestrogen when used in combination with dydrogesterone. **Warnings and Precautions:** Before initiating dydrogesterone treatment for abnormal bleeding or the bleeding should be clarified. Breakthrough bleeding and spotting may occur during the first months of treatment. If breakthrough bleeding or spotting appears after some time on therapy, or continues after treatment has been discontinued, the reason should be investigated, which may include endometrial benign to exclude endometrial malignancy. **Pregnancy and Lactation:** Pregnancy: It is established that more than 10 million pregnancies have been exposed to dydrogesterone. So far there was no indication of a harmful effect of dydrogesterone use during pregnancy. Some pregnancies have been reported in the literature to be associated with an increased risk of hypoglycaemia. However due to confounding factors during pregnancy, no definite conclusion can be drawn regarding the contribution of dydrogesterone to hypoglycaemia. Clinical studies, where a limited number of women were treated with dydrogesterone early in pregnancy, have not shown any increase in risk. No other epidemiological data are thereto available. Effects in non-clinical embryo-fetal and post-natal development studies were in line with the pharmacological profile. Unwanted effects occurred only in exposure which exceeded the maximum human exposure considerably, indicating little relevance to clinical use. Dydrogesterone can be used during pregnancy if clearly indicated. Breastfeeding: No data exist on secretion of dydrogesterone in mother's milk. Experience with other progestagens indicates that progestagens and the metabolites pass to mother's milk in small amounts. Whether there is a risk to the child is not known. Therefore, dydrogesterone should not be used during the lactation period. **Fertility:** There is no evidence that dydrogesterone decreases fertility at therapeutic dose. **Adverse Reactions:** The most commonly reported adverse drug reactions of patients treated with dydrogesterone in clinical trials of individuals under treatment are migraines/headaches, nausea, menstrual disorders and breast pain/tenderness. Undesirable effects that are associated with an oestrogen-progesterone treatment: Breast cancer, endometrial hyperplasia, endometrial carcinoma, ovarian cancer • Venous thromboembolism • Myocardial infarction, coronary artery disease, ischemic stroke. Based on S1414. Source: Prepared based on full prescribing information (version 5.0) dated 13/05/2014.

## Believe what you are seeing

Experience the wonders  
of 5D Ultrasound

### Highlights

- (1) Doctors having 25 years of vast experience
- (2) Premium 5D technology introduced in world just before 8 months. Now available here at no extra cost

### Services Offered

- (1) Unique 5D experience.
- (2) Excellent image quality that gives fast & accurate diagnosis.
- (3) Ideal image quality for target exams.
- (4) Revolutionary technology specially for obstetrical, gynecological, abdominal, breast and neck sonography examination.
- (5) Advanced feto realistic View (..showing sharp, clear & real images of baby)

### Applications

- (1) For diagnosis of all abdominal diseases
- (2) Diagnosis and detailed evaluation of pregnancy at all stages including 3D, 4D & 5D Sonography, targeted study & foetal echocardiography
- (3) Female pelvic study for uterus, ovaries & adnexal Diseases
- (4) Breast sonography
- (5) Arterial & venous Doppler study
- (6) Thyroid & neck sonography
- (7) Musculoskeletal sonography including nerve study.

# INDIA'S LARGEST CHAIN OF FERTILITY CLINICS CELEBRATES A NEW MILESTONE.

Celebrating  
**5000**  
**IVF**  
PREGNANCIES  
& COUNTING

With your help and support, Nova IVI Fertility has achieved a landmark of 5,000 IVF pregnancies in just 39 months. We performed 12,024 cycles with a success rate of 42%. With advanced technology from IVI, Spain and world-class expertise, we will continue to spread smiles across India and the world.

## 5 KEYS THAT PAINTED 5K SMILES

- Partnership with IVI, Spain: World leaders in Assisted Reproductive Technology (A.R.T.).
- Clinical Expertise: Internationally acclaimed and experienced team of doctors, ensuring a patient-centric approach.
- Skilled Embryologists: Highly trained team of in-house embryologists ensuring high quality lab services.
- Cutting-edge Technology: Latest techniques and technologies, ensuring a high success rate.
- Trust: Of our patients, referring doctors and consultants which has led to this achievement.

Dear AOGS member

We are in a process of preparing new directory this year. For that we need to collect some data. We request you to help us by furnishing required necessasary data

Data is to be submitted by two means :

- (1) Firstly here with this, a form is sent to you. Kindly fill in form and return it to AOGS office via post, courier, pharma person, scanned copy through email.
- (2) Secondly you will receive SMS containing AOGS website link in near future. You have to click that link and fill in required information to update your data.

Your data should reach to AOGS office latest by 10/10/2015, 5.00pm

If not submitted by deadline, your old details will be considered for directory.

**Advertisements for New Directory are invited**

**Rates are as follows :**

1. Last Page - ₹1,50,000/-

2. Second Last Page - ₹1,00,000/-

3. Page 2 - ₹1,00,000/-

4. Inside Fullpage - ₹50,000/-

5. Inside Half Page - ₹25,000/-

**Dr. Kiran Desai**  
President AOGS

**Dr. Anil Mehta**
