TEAM AOGS MESSAGE

Dr. Anil Mehta
President

Dr. Mukesh Savaliya
Hon. Secretary

Season's greetings

We are overwhelmed by the grand success of HRPCON 2019 Conference.

When We selected venue as Eka Club, so many had a doubt about success of conference at this venue.

It was for the first time that any conference was being organized in the Eastern Ahmedabad.

But those who attended the conference, witnessed the luxurious space, huge parking, delicious food & excellent academics. All credit goes to whole team of HRPCON 2019. We (Dr. Anil Mehta & Dr. Haresh Doshi) as organizing Chairpersons as well as Dr. Mukesh Savaliya & Dr. Phagun Shah as organizing Secretaries, thank all the delegates as well as Pharma companies for their wholehearted support.

Dr. Kiran Desai, Dr. Akshay Shah, Dr. Munjal Pandya, Dr. Aarti Vazirani also helped a lot. Above all, the dedicated work of residents & volunteers was of tremendous help.

We expect similar kind of support in future also.

"Future belongs to those who prepare for it today"

Dr. Anil Mehta
President AOGS

Dr. Mukesh Savaliya
Hon. Secretary AOGS

FUTURE PROGRAMME

Innovative surgical technique for managing Post Partum Haemorrhage COMOC-MG (COM- compression, OC- Occlusion)

Dr. Mahesh Gupta

As maternal mortality is still a major concern in the world.

As Millennium Development Goal is to reduce the MMR to one third to present rate so we the gynecologist have to adopt some innovative technique to contribute it.

At present there are many surgical techniques to control the PPH and to conserve the uterus.

Our technique

is easier, more effective and speedier technique to control hemorrhage.

is reproducible.

doesn't require special assistance or sophisticated instruments.

can be a part of routine teaching curriculum in post graduate study.

30 female pregnant patients were subjected to this technique.

After taking out the fetus from the uterus or post partum gravid uterus in case of Normal Delivery, uterus is to be exteriorized.

Suture material is to be kept in operation theatre which is shown below.

Needle is passed from 3 cm below and 3 cm medial to lower cut edge of the uterus in case of cesarean section or 3 cm medial from lateral edge of uterus in Isthmus, for full thickness of myometrium.

From double strand, one strand will make a loop on the top of uterus as Heyman's suture.

Second strand of suture is to be taken in front from avascular area in the broad ligament just below the cut edge of uterus.

Both strand tied firmly.

Aim is vertical compression of the gravid uterus as well as occlusion of the ascending branch of the uterine artery which is going to anastomose with the branch of ovarian artery.

So single puncture will suffice to compress as well as to occlude.

It has an advantage of not only compression but occlusion of uterine vessel.

It will not obstruct the uterine cavity, So no intra- uterine collection post operatively.

If B- Lynch operation fails than only alternate is an Obstetric hysterectomy, but here as uterine cavity can be explored vaginally hence Still Balloon Therapy has a scope.

There is no chance of muscle necrosis also.

Training is very easy.

No sophisticated extra instruments are required.

About the Pioneer

With 35 years of expertise, Dr. Mahesh Gupta, MD a high risk obstetric consultant practicing Gynecology in the City of Ahmedabad, India has pioneered an innovative technique called COMOC- MG to minimize the complications of delivery.

Understanding the Procedure

COMOC- MG provides a very simple and effective surgical method of controlling the Atonic PPH and has proved to be lifesaving. It has contributed significantly in the reduction of maternal mortality rates.

Ready-to-use QR code to watch the video and learn more about the COMOC- MG procedure

Every suture box will have a above leaflet with Q R code, which can be scan and you can see the technique or steps of surgery very well in operation theatre during PPH.

EVEN THIS CODE CAN BE SCAN TO WATCH THE VIDEO.

LAP Onco Gynaec Surgeries

COMPLETE TREATMENT OF THE DISEASE AT SINGLE SITTING BY PROPER UNDERSTANDING AND TIMELY USE OF TECHNOLOGY

First Endoview of Ovarian Cyst

- 75-year-old female with h/o Abdominal Hysterectomy done 30 years back came with c/o severe pain in left iliac region since 5-6 days.
- USG was S/O big septate ovarian cyst of approx 20 x 18 cm size in lower abdomen. LDH was raised, rests of the tumor markers were normal.
- PLAN: Laproscopic management of suspicious big ovarian mass?malignancy

Intact Specimen Removed

- Frozen section report of the ovarian mass sent during operation turned out to be Boderline Mucinous Neoplasm. At the same sitting Lap BSO+ Omentectomy+ Appendicectomy+ Bilateral pelvic lymphadenectomy+ Para-aortic lymphadenectomy was carried out.
- Pt was discharged at day 2 post-surgery. Final HPR was Boderline mucinous neoplasm with microscopic foci of invasive mucinous carcinoma.
